

How can I tell what device and versions of my computer I have?

For smart devices:

If you have **one** button at the bottom you have an Apple iOS device: iPad, iPhone, iPod

If you have **three** buttons at the bottom you have an Android device: Many different models

For Windows computers:

Look at the bottom left corner of your screen. The Start button (or lack of one) will tell you which version of Windows you are using.

For Mac computers:

Click on the Apple icon  in the top left corner of your screen. From there, you can click "About this Mac". You'll now see a window in the middle of your screen with information about the version of Mac you are using.
